Our customers:

- Private homeowner
- Construction Company
- Architect
- Property Developer

We will help our clients navigate the complex rules and regulations, ensuring we find the safest, most cost effective and logical solution for your bespoke fire project.

1st Fix

Finished Product

Kings Langley is a village situated on the outskirts of London, surrounded by countryside and just a short drive to the Chiltern Hills. Previously an office building, Shannon House has permitted development approval to convert into 73 luxury studio apartments, situated over four floors.

Safeguard Sprinkler Systems have been appointed to install a Fire Sprinkler System offering full coverage to all 73 studio apartments and communal areas.

The project is a Risk Category 2 which means that Safeguard Sprinkler Systems will install a full cover, domestic fire sprinkler system. In total, there will be 283 fire sprinkler heads, fed by a pump and tank,

located in the basement of the building.

As Shannon House is a residential property, the fire sprinkler system will provide the building with a 30-minute operational run time.

Roebuck House

We make no compromises when it comes to safety, all our materials are recognised and endorsed by **Firas (Installer Certification Scheme)**, and conform to **BS9251:-2021** standards.

Our engineers are industry qualified professionals who take great pride in the quality of their work.

Pump and Tank System

Roebuck House is a seven-storey building, located next to Cosham Interchange in Portsmouth. It was built in the 1970's to accommodate a number of offices, but in the last few years, the property has been unoccupied. Planning permission was granted to convert the building into luxury apartments, which will provide much needed housing for the community.

Located just 100 metres from the Railway Station, Roebuck House will be a desirable place to live, being situated in an ideal location, with 42 one bed and 14 two bed luxury apartments to choose from.

Systems were appointed to install a new Category 4 Fire Sprinkler System in the building. This will safely protect the communal areas and all of the new apartments in the event of a fire.

Fire safety was high on the list of priorities for the property developer, and Safeguard Sprinkler
